

Client-Einstellungen - AntiSpam

Client-settings - AntiSpam

The AntiSpam module is available as part of the Client Security Business, Endpoint Protection Business and Managed Endpoint Security [solutions](#).

If you check the option **Use spam filter**, client email traffic will be checked for possible spam mails. You can configure a warning message that will be added to the subject line when an email is identified as spam or falls under suspicion of being spam.

If the [Microsoft Outlook plugin](#) has been enabled, incoming spam mails will be moved to the AntiSpam folder. For other e-mail clients, spam mails can be automatically moved to a dedicated spam folder by defining a filter rule that matches the spam warning in the subject. To configure AntiSpam settings when using Microsoft Exchange, see Exchange settings > [AntiSpam](#).
